Scenario 2

Please read all of the instructions before commencing.

1. The robot must move all the drinkware from the side table to the bottom shelf.

2. The robot must also move all the food from the side table to the food storage area (orange box) on the middle shelf. The robot does not know the location of the food storage area.

3. Specify where the food storage area should be before executing this task. Make sure to include the entire food storage area in your specification.

4. Place one object on the table at a time, so that the robot may move it to its designated area on the shelves.

5. Only one object can be on the table at a time.
